

CI PLUS 1.3 CAM & OPERATOR PROFILE

Ease and simplify your channels installation!

The NEOTION CI Plus CAM - embedding the CI Plus 1.3 Operator Profile software resource - **allows all CI Plus 1.3 Host devices to perform a full installation and a customized channel list** of all of the services required by the Operator.

The Operator Profile resource in the NEOTION CI Plus CAM **really increases Operator control over content usage:**

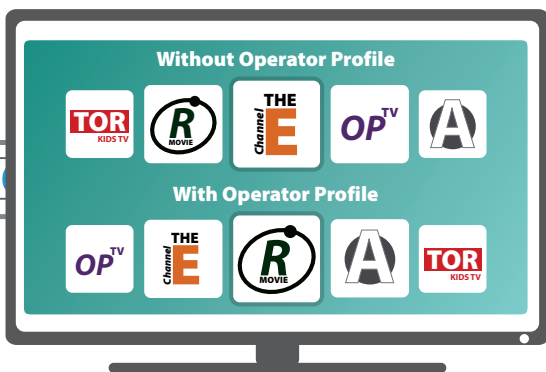

- The CAM converts the Operator's network signalization (SI/PSI tables) into a uniform structure: a local generated list (CICAM NIT).
- The CAM provides the CICAM NIT to the Host enabling easy updates and modifications.

The NEOTION CI Plus CAM plugged in a CI Plus 1.3 compatible iDTV **filled a new gap for Operators** and remains a secured, suitable and green alternative solution to set-top-boxes.

The NEOTION CI Plus CAM is able to manage:

- A profile for each country when the Operator services are deployed in multiple countries,
- Multiple profiles when the Operator services include multiple Operator profiles (OP1, OP2, OP3, OP4...).

- ▶ **User friendly installation:** automatic channels listing search, no more TV scan to find your program.
- ▶ **Easy bouquet update:** new channels from the Operator's services will be updated directly and automatically by the TV set via the CAM.
